11.2.2 Other information

Other information : As these products are mainly made of mineral raw materials, they may contain traces of crystalline silica. Mechanical action (eg cutting, sanding, drilling etc) will release dust which may contain respirable crystalline silica particles.
Inhalation of high concentrations of dust may irritate the airways. Dust may also cause irritation of the eyes and/or skin.
Inhalation of dust containing crystalline silica, in particular the fine respirable size fraction, in high concentrations or over prolonged periods can lead to lung disease (silicosis) and an increased risk of lung cancer. The latter is concluded by IARC on the basis of observations in industries with heavily exposed populations, such as mining, pottery and foundries.
